

Electricians Gloves™

Insulation at its best

Electricians Gloves™ from Polyco are insulating gloves made from non-conductive natural rubber, combining high dielectric and physical strength to offer excellent electrical resistance.

Polyco's Electricians Gloves™ offer the highest level of electrical protection available, certified to EN60903. Every pair is electrically tested and has to pass the requirements of the standard prior to release for sale. No gloves of classes 1, 2, 3 and 4 electricians gauntlets, not even those held in storage, should be used unless they have been tested within a maximum period of six months. The tests include air inflation to check for air leaks, a visual inspection while pressurized and a routine dielectric test in accordance with the European standard EN60903. For classes 00 and 0, a check for air leaks and a visual inspection may be considered adequate, however a routine dielectric test may be performed at the owner's request. They are anatomically shaped, flexible and durable offering maximum comfort and superior performance. Polyco's Leather Protection Gauntlet™ can be worn over the top to provide mechanical protection.

Electricians Glove Bag

Leather Protector Gauntlet

Rubber insulating gloves are classified according to the level of voltage and protection they provide. The voltage protection is broken down according to the following classes:

Class 00: Maximum working voltage 500V

Class 0: Maximum working voltage 1,000V

CE 0333 
Complies with EN60903
Case Quantity
1 pair per polybag

Typically Used For

- Electrical Maintenance
- Installations
- Wiring

Size	8	9	10	11
Class 00	RE00360/08	RE00360/09	RE00360/10	RE00360/11
Class 0	RE0360/08	RE0360/09	RE0360/10	RE0360/11
