Why Roadcraft Hotline?

Hotline is easy get professional, permanent results yourself

Hotline is eye-catching available in many colours

Hotline is flexible we will pre-cut it to any shape you need

Hotline is practical available in rolls, sheets, lines, numbers, letters and markings

Hotline is versatile non-slip and reflective coatings are easy to apply

Hotline is great value for money.

Hotline is a Thermoplastic road marking material made in our own semi-automated production facility. It is a preformed material which is supplied to you ready-to-use. There's no need for any sophisticated or truck-mounted installation equipment making it easier to apply in hard-to-reach or confined spaces. Hotline is ideal for any practical person to apply, saving you money and making application simple to organise.

Key points for successful application

- The surface should be sound, dry and in good condition. The temperature should be moderate.
- Lay out **Hotline** material. Using an appropriate gas Dutch Burner, apply heat side-to-side across all areas of material. Continue applying heat until **Hotline** can be seen to fuse into the surface. Ensure edges are completely sealed.
- Once material has cooled, check that you have a successful bond between the **Hotline** and the surface.
- Once cool, **Hotline** can be trafficked.

Ensure that you read our complete application instructions before commencing work.

Hotline

Thermoplastic road and surface markings

Hotline Uses

Car Parks and similar off road marking

Hotline preformed markings are excellent for many types of works and are ideal for many surface, highway and non-highway jobs, and especially beneficial in areas such as car parks. Application is easy, many jobs can be done by one person with just a few basic tools.

We supply **Hotline** in a range of colours; in 5m rolls or 1m strips and in widths of 50mm to 200mm. **Hotline** can be supplied preformed as numbers, letters, and directional arrows, in various colours and sizes. It is ideal for marking in areas such as car parks where equipment maneuverability is difficult or available labour is restricted.

Reinstatement of existing lines

Hotline preformed markings are excellent for the renewal of old and worn markings or reinstatement where lines have been worn, obliterated or removed due to roadworks.

Street Signs

The application of street signs onto a public road surface offers excellent public visual awareness and an alternative to a post mounted traditional road sign. Various signs are available to give warning, to inform, or give cautionary directions.

Hotline signs are also available for non-highway use: public leisure areas, walkways or cycle paths, as well as commercial and industrial sites providing employee and visitor information.

Corporate, club and personal logos

Corporate or club logos manufactured from **Hotline** can enhance and publicise your company or club.

Applied at your car park or building entranceway, **Hotline** can replicate any company identity or logo.

School Playground markings

Using **Hotline** for playground markings can transform a school area into a fun place where children wish to spend their break times. **Hotline** can be preformed into hopscotch, snakes and ladders, a maze, a compass or the alphabet... We offer many other markings to add fun to a school playground and aid education.
